                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                     ठे
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents a delta-endotoxin crystal protein. This protein was included in the scope of the invention as a comparison to the delta-endotoxins of the invention. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for generating altered or improved delta-endotoxin or delta-endo
                                                                                                                                                                                                                                                                                                                                                 isolated delta-endotoxin and delta-endotoxin-associated nucleic acids polypeptides, useful for killing lepidopteran or coleopteran pests or producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             246
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      186
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          367 AAAACAGTATGGACACAATTTATTAAAATGGGAGAAATTTTTGTTGATACACCGTTAACA 426

                             A plasmid contg. the gene is isolated by forming a gene library from plasmid DNA of B.thuringtensis israelensis (HD 522 strain, USA Goldberg ONRGO) followed by screening with anti-israelensis insecticidal protein IG. The insecticidal protein is highly effective against Diptera, esp. Aedes. See also AAP81034. (Updated on 24-OCT-2003 to standardise OS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   pMYC1625 which was isolated from a genomic library prepd. from DNA from B.t. PS71M3 [from B.t. PS71M3-69 (NRRL B-18515)]. It is related to the cryIVA toxins, the 140 kD endotoxin and the type II toxin from B.t. var. israelensis. The protein has a mol. wt. of 130 kD. Microorganisms transformed with the DNA may be administered to dipteran insects or their environments, the expressed toxins acting as an insecticide. See also

A library was constructed from Bacillus thuringiensis PS71M3 total cellular DNA in lambda Gem-11. Plasmid pMYC1625, selected in Escherichia coli, contained a 8.0 kb insert expressing a beta-endotoxin gene. This was sequenced (AAQ81178). A cured, acrystalliferous B.t. host carrying pMYC1625 produced a 130 kb acrystal protein (AAA63078) toxic to calliphorids. (Updated on 25-MAR-2003 to correct PN field.)
Delta-endotoxin; crystal protein; biological control agent; Calliphorid; screw-worm; sheep blowfly; Lucilla; Phormia; Calliphora; insecticide; pesticide; B.t.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Method for controlling Calliphoridae pests - specifically utilises Bacillus thuringiensis isolates or toxins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to isolated delta-endotoxin nucleic acid molecules, cry26Aa1 and cry28Aa1 isolated from Bacillus thuringiensis finitimus, that is active against insects. The invention is useful for producing an insect-resistant plant, by introducing the nucleic acid molecule into the plant, where the nucleic acid is expressible in the plant in an effective amount to control an insect. The invention is useful for producing a toxin that is active against insects by obtaining the transgenic host cell and expressing the nucleic acid molecule in the host cell, which results in the toxin that is active against insects. The toxin is useful for controlling an insect by delivering to the insect an effective amount of toxin. The invention is useful for controlling insects. The toxin is useful for inhibiting the ability of insect pest to survive, grow or reproduce, for inhibiting insect related damage or loss in crop plants, and to prophylactically treat insect susceptible areas or plants to confer protection or resistance against harmful insects. The present sequence is Bacillus thuringiensis

The sequences for the delta-endotoxin polypeptides are also disclosed. The invention provides methods for producing the toxins and compositions containing the toxins. The methods and sequences of the invention are useful for controlling insect pests in transgenic plants confer insect resistance. The present sequence represents the cry28Aal delta-endotoxin of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to the isolation of novel cry26Aal and cry26Aal delta-endotoxin genes from Bacillus thuringiensis ssp. finitimus. The sequences for the delta-endotoxin polypeptides are also disclosed. The invention provides methods for producing the toxins and compositions containing the toxins. The methods and sequences of the invention are useful for controlling insect pests in transgenic plants confer insect resistance. The present sequence represents the cry28Aal delta-endotoxin of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AGIGCTGATACAATTGCTGCAGTTAGTGCAGGTACTATTGTATCCGGTACTCTGTTAGCC

A library was constructed from Bacillus thuringlensis PS71M3 total cellular DNA in lambda Gem-11. Plasmid pMYC1636, selected in Escherichia coli, contained a 15 kb insert expressing a beta-endotoxin gene. This was sequenced (AAQ81180). A cured, acrystalliferous B.t. host carrying pMYC1636 produced a 77 kba crystal protein (AAR63079). (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       133 TACAAAGAGTGGCTCAATATGTGTCAAGGGAATACACAATATGGTGATAATTTCGAGACA 192

                                                                                                                                                         The sequence was deduced from the DNA sequence obtd. from plasmid pMYC1636 which was isolated from a genomic library prepd. from DNA from Et. PS71M3 [from B.t. PS71M3-69 (NRRL =18515)]. It is related to the crylVC toxins from B.t. var. israelensis. The protein has a mol. wt. of 77 kD. Microorganisms transformed with the DNA may be administered to dipteran insects or their environ. mente, the expressed toxins acting as an insecticide. See also ARA14373. This sequence represents a delta-endotoxin crystal protein. This protein was included in the scope of the invention as a comparison to the delta-endotoxins of the invention. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for generating altered or improved delta-endotoxin or delta-endotoxin-associated proteins that have
                                                                                                                                                                                                                                                                                                                                     isolated delta-endotoxin and delta-endotoxin-associated nucleic acids polypeptides, useful for killing lepidopteran or coleopteran pests or producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TACAAAGAGTGGCTCAATATGTGTCAAGGGAATACACAATATGGTGATAATTTCGAGACA 192

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2, A Sequence 2, A Sequence 6, A Sequence 2, A Sequence 8, A Sequence 8, A Sequence 10, A
